SUBJECT INDEX

acetylcholine release - caused by eserine, 589
- influence of minaprine, 37
- involvement of protein kinase C, 37
acetylcholine - microdialysis, 589
acetylcholinesterase activity - effect of diabetes, 159
acetylcholinesterase - carbamylation and decarbarmylation, 173
- effect of physostigmine and carbaryl, 1
- influence of oxime, 173
adenylate cyclase - action of GTP and dopamine, 23
agrin-like proteins - of neuromuscular junction, 301
alloxan - induced diabetes, 159
α_2 receptors - binding of mivazerol, 221
Alzheimer's disease - accumulation of β-amyloid precursor protein$_{695}$, 281
γ-aminobutyric acid - see GABA
α-amino-hydroxy-5-methyl-4-isoxazole-propionic acid - see AMPA
ammonia - affects taurine release, 317
AMPA agonist - (S)-APPA, 507
AMPA agonists - molecular pharmacology, 507
AMPA antagonist - (R)-APPA, 507
AMPA receptors - activated by α-dendrotoxin, 81
AMPA - effect on calcium, 459
β-amyloid precursor protein$_{695}$ - accumulation in Alzheimer's disease, 281
- 50 kDa N-terminal fragment, 281
anterograde serotonin transport, 231
antioxidant - defense in brain, 201
(S)-APPA - AMPA agonist, 507
(R)-APPA - APMA antagonist, 507
^{3}H-aspartate release - modulated by metabotropic glutamate receptors, 525
aspartate - uptake into synaptosomes, 583
astrocytes - content and release of taurine, 317
- DNA metabolism, 165
- glucose metabolism, 473
- hypoxia, 473
- phosphoinositide metabolism, 165
- stimulation of cAMP, 1
astrocytoma clone D384 cell line - cholecystokinin metabolism, 369
autoradiography - localisation of ^{125}I-LDS binding sites, 565

binding experiments - for localising opioid receptors, 401
binding sites - for iodomelatonin, 101

calcium responses - to AMPA, 459
calcium signals - related to activation of GABA$_B$ receptor, 349
calcium - influences binding of ligands to non-NMDA amino acid receptors, 379
cAMP - influence of Cholera toxin, isoproterenol, phorbol ester, 1
carbamylation - of acetylcholinesterase, 173
carbaryl - effect upon acetylcholinesterase, 173
cardiovascular responses - in diabetic rats, 183
catecholamines - in diabetic rats, 183
^{3}H-CGS 19755 binding sites - to spinal cord, 329
^{3}H-CGS 19755 - ligand for NMDA receptor, 329
cholecystokinin metabolism - in different cell lines, 369
Cholera toxin - action on cAMP, 1
cholinergic markers - influence of nerve growth factor, 459
cholinesterases - effect of tacrin and derivatives, 555
- in blood, 555
convulsant uremic guanidino compounds, 215
cytotoxic effects - of glutamate, 485
c-fos - activation associated with expression of procholecystokinin gene, 253
c-jun - activation associated with expression of procholecystokinin gene, 253

decarbarmylation - of acetylcholinesterase, 173
α-dendrotoxin - and non-NMDA activation, 81
- induces hippocampal damage, 81
- selective K^+ channel blocker, 81
desipramine treatment - dopamine action on adenylate cyclase, 23
- influence on dopamine receptors, 23
desipramine - action on D_1 and D_2 receptors, 23
- effect upon Na^+, K^+-ATPase, 91
development of neurones - localisation of gangliosides, 323
diabetes - effect upon acetylcholinesterase activity, 159
- produced by alloxan, 159
diabetic rats - cardiovascular responses and catecholamines, 183
- streptozocin, 183
5,7-dihydoxytryptamine lesion - anterograde serotonin transport, 231
dithiothreitol - influence on glutamate-induced release of GABA, 575
divalent cations - effects on ^{3}H-GR 65630 binding to 5-HT_3 receptors, 259
DNA synthesis - in astrocytes, 165
DNA synthesis - promoted by phosphatidic acid, 165
domoic acid - induces release of GABA from retinal cells, 267
dopamine D_4 receptors - regulates activity of serotonin N-acetyltransferase, 275
dopamine receptor - regulates serotonin N-acetyl transferase activity in retina, 275
dopamine receptors - effect of chronic lithium treatment, 13
- influence of desipramine, 23
dopamine - influence on adenylate cyclase, 23
dopaminergic system - toxicity induced by MPTP, 559

encapsulated fibroblasts, 495
ependymal cell junctions - neoglycoproteins, 43
eserine - releases acetylcholine, 589
ethanol - effect on phosphatidylinositol-4,5-bisphosphate, 541
- effect on phospholipase C, 541
excitatory amino acids - influence on phosphatidylinositol turnover, 191
excitotoxic induction - of ornithine decarboxylase, 549

fibroblasts - genetically engineered, 495
- production of nerve growth factor, 495
free radical damage - in brain, 201

GABA infusion - effect upon glutamate decarboxylase activity, 363
^{3}H-GABA release - evoked by glutamate agonists, 575
- from retinal cells induced by domoic acid, 267
GABA release - glutathione, dithiothreitol influence on glutamate action, 575
- mediated by muscarinic M_1 receptors in cortex, 389
$GABA_B$-receptor-mediated inhibition of calcium signals, 349
ganglioside immunostain localisation - developmental changes, 323
glial fibrillary acid protein - phosphorylation induced by glutamate, 517
glucocorticoid receptors in rat brain - characteristics, 339
glucocorticoid receptors - binding of ^{3}H-triamcinolone acetonide, 339
glucose metabolism - in astrocytes, 473
glutamate action - influence of glutathione, dithiothreitol, 575
glutamate agonists - evoke release of ^{3}H-GABA, 575
glutamate decarboxylase activity - influence of GABA infusion, 363
glutamate receptor agonists - influence on PC12 cells, 485
glutamate receptors - metabotropic subtypes, 439
glutamate toxicity - protection by prostaglandins, 395
glutamate - cytotoxic effects, 485
- effect on glial fibrillary acid protein, 517
- uptake into synaptosomes, 583
glutathione - influence on glutamate-induced release of GABA, 575
glycerophospholipids - susceptibility to oxidative attack, 241
^{3}H-GR 65630 binding - to 5-HT_3 receptor, 259
granule neurones - content and release of taurine, 317
GTP - influence on adenylate cyclase, 23
guanidinosuccinate - convulsant, 215
G-protein coupled glutamate receptors, 439
G-protein - target for lithium, 13

hippocampal damage - caused by α-dendrotoxin, 81
5-HT_{2A} receptors - labeled by ^{125}I-LSD, 565
- localisation in guinea pig and rat brains, 565

5-HT_3 receptors - ^{3}H-GR 65630 binding, 259
5-HT_3 receptors - effects of divalent cations on ^{3}H-GR 65630 binding, 259
hydroxyl free radicals - attack on myelin lipids, 241
hypothermia-sensitive calcium responses - in brainstem cells, 459
hypoxia - astrocytes, 473
- changes followed by NMR, 473
^{3}H-inositol 1,4,5-triphophosphate binding - characterisation, 73
^{125}I-iodomelatonin - binding, 147

ionotropic excitatory amino acid receptors - binding studies, 379
isoproterenol - stimulates cAMP, 1

kidney cells - transfected with metabotropic glutamate receptor cDNA, 533

lithium treatment - influence on G-protein, 13
lithium - effect on dopaminergic receptor, 13
^{125}I-LSD - labels 5-HT_{2A} receptors, 565
- localisation of binding sites, 565

mannose - effect on ependymal cell barrier, 43
melatonin receptors, 101, 147
melatonin - molecular and cellular effects, 117
meningo-cortical injury - affects c-fos, c-jun and procholecystokinin gene, 253
metabotropic excitatory amino acid receptors - in transmission, 451
metabotropic glutamate receptor cDNA - used to transfect kidney cells, 533
metabotropic glutamate receptors, 439
- heterogeneity, 533
- novel functions, 439
metabotropic receptors, 191
- activation causes GFAP phosphorylation, 517
- involved in aspartate release, 525
α-methyl serotonin - used to measure serotonin transport, 231
1-methyl-4-phenyl-1,2,3,6-tetrahydropyridine - see MPTP
methylguanidine - convulsant, 215
microdialysis - of acetylcholine, 589
minaprine - influence on acetylcholine release, 37
mitochondrial membranes - oxidation of vitamine E, 29
mivazerol - specificity for α_2-receptors, 221
MK-801 - does not protect against MPTP toxicity, 559
modulation of aspartate release - by glutamate receptors, 525
monoamines - effect of sodium valproate, 67
MPTP-induced toxicity - of retinal dopamine system, 559
- protection by quinolinic acid, 559
muscarinic M_1 receptors - mediates inhibition of GABA release in cortex, 389
muscarinic receptors - influence of nerve growth factor, 57
myelin lipids - susceptibile to oxidative attack, 241

Na^+, K^+-ATPase actvity - effect of desipramine, 91
Na^+,K^+-ATPase activity - associated with noradrenergic system, 91
neoglycoproteins - and ependymal cell junctions, 43
nerve growth factor - effect on muscarinic receptors, 57
- influence on cholinergic parameters, 459
- produced in fibroblasts, 495
neuroblastoma line SH-SY5Y - cholecystokinin metabolism, 369
neuromuscular junction - agrin-like proteins, 301
NMDA receptor blockade - effect on polyamine metabolism, 549
NMDA receptor - induces translocation of PKC, 209
-^{3}H-CGS 19755 a ligand, 329
- binding studies, 379
NMDA receptor activation - translocation of PKC into nucleus, 209
NMDA - action on phosphatidylinositol turnover, 191
NMR - to follow changes from hypoxia, 473
non-NMDA receptors - binding of ligands affected by calcium and potassium thiocyanate, 379
noradrenergic system - involvement of Na^+, K^+-ATPase activity, 91
nuclear magnetic resonance - see NMR
nucleus - PKC, 209
N-methyl-D-aspartate - see NMDA

opioid receptors - heterogeneity, 433
- in peripheral tissues, 427
- subtypes, 401
ornithine decarboxylase - excitotoxic induction, 549
oxidation - of vitamine E, 29
oxime - action of acetylcholinesterase, 173

PC12 cells - influence of glutamate receptor agonists, 485
phenylglycine antagonists - at metabotropic glutamate receptors, 451
^{3}H-phorbol ester binding - 209
phorbol ester - potentiates Cholera toxin stimulated cAMP, 1
- potentiates isoproterenol stimulated cAMP, 1
phosphatidic acid - promotes DNA synthesis, 165
- promotes phosphoinositide metabolism, 165
phosphatidylinositol turnover - effect of excitatory amino acids, 191
phosphatidylinositol-4,5-bisphosphate - influence of ethanol, 541
phosphoinositide metabolism - in astrocytes, 165
- promoted by phosphatidic acid, 165
phospholipase C - influence of ethanol, 541
phosphorylation - of GFAP by glutamate, 517
physostigmine - effect upon acetylcholinesterase, 173
PKC translocation - caused by activation of NMDA receptor, 209
polyamine metabolism - action of NMDA receptors, 549
potassium channel blocker - α-dendrotoxin, 81
potassium thiocyanate - influences binding of ligands to non-NMDA amino acid receptors, 379
procholecystokinin gene - induced by injury, 253
prostaglandins - protects neurones from glutamate toxicity, 395
protein kinase C - in release of acetylcholine, 37
protein kinase C - see PKC

quinolinic acid - protects MPTP-induced toxicity of dopaminergic system, 559

receptors - for melatonin, 101, 147
release - of GABA, 389
retina of goldfish - MPTP-induced toxicity of dopamine system, 559
retinal cells - release of GABA, 267
retinal serotonin N-acetyltransferase, 275

scopolamine - influence on eserine-induced release of acetylcholine, 589
serotonin N-acetyltransferase in retina - regulated by dopamine via D_4-receptor, 275
serotonin transport - effect of lesions by 5,7-dihydroxytryptamine, 231
- measured with α-methyl-serotonin, 231
serotonin - see 5-HT, 5-hydroxytryptamine
sodium, potassium ATPase - see Na^+, K^+-ATPase
sodium valproate - action on monoamines, 67
sphingolipids - susceptibility to oxidative attack, 241
spinal cord - NMDA receptors, 329
streptozocin - diabetic rats, 183
synaptosomes - oxidation of vitamine E, 29
- uptake of glutamate and aspartate, 583

tacrin - effect upon cholinesterases, 555
taurine - release influenced by ammonia, 317
thiobarbituric test - measurement of oxidative attack on myelin lipids, 241
transfection - of kidney cells with cDNA of glutamate receptor, 533
^{3}H-triamcinolone acetonide binding - to glucocorticoid receptors, 339
tubulin binding protein - in plasma membrane, 289

uremic guanidino compunds - uptake in juvenile mice, 215

vitamine E - an antioxidant in mitochondrial membranes, 29
- oxidation, 29
